"Billing errors exist on almost every vendor invoice"

Aberdeen

UTR - 17 years of experience in telecom expense reduction

UTR specializes in reducing telecommunications expense by auditing your vendor billing. UTR will audit your voice, data, wireless, paging, audio conferencing vendor bills. We will work with your vendors to get the bill corrected and secure you a refund check for past over-billings. **If we don't get you a refund or establish an approved savings, our bill to you is nothing.**

Over the past 17 years we have performed over 2,000 audits for medium to large sized companies. In every case we have found billing errors or established a savings that reduces the vendor bill. UTR has a 100% track record of success no matter what you

spend on your telecommunications billing.

With UTR it is easy to get started with our Billing Verification Service. UTR has been working with all of the vendors in North America since 1991. The components of our service are:

- UTR will coordinate with your vendors to receive a copy of your latest billing records, either paper or portal.
- UTR will verify all charges against the latest tariff changes and schedules. We will review all contracts and rate plans to determine if you are being charged correctly and only for the services that you are using.
- UTR will review our findings with you and with your permission present our analysis to the vendor for a refund and correction to the bill.

- UTR will track all refunds, credits and savings.
- UTR will provide you with a project report on all findings as well as supply tips to help you avoid future billing errors.
- UTR will submit an invoice to you for payment only if we get you a refund or establish a savings that is approved by you.
